HYPERLIQUID TRADER BEHAVIOR INSIGHTS

Market Sentiment × Trading Performance Analysis
211,224 Trades · 246 Assets · 2023–2025

Total Trades	Total PnL	Avg Win Rate	Unique Traders
211,224	$16.2M+	83.9%	104

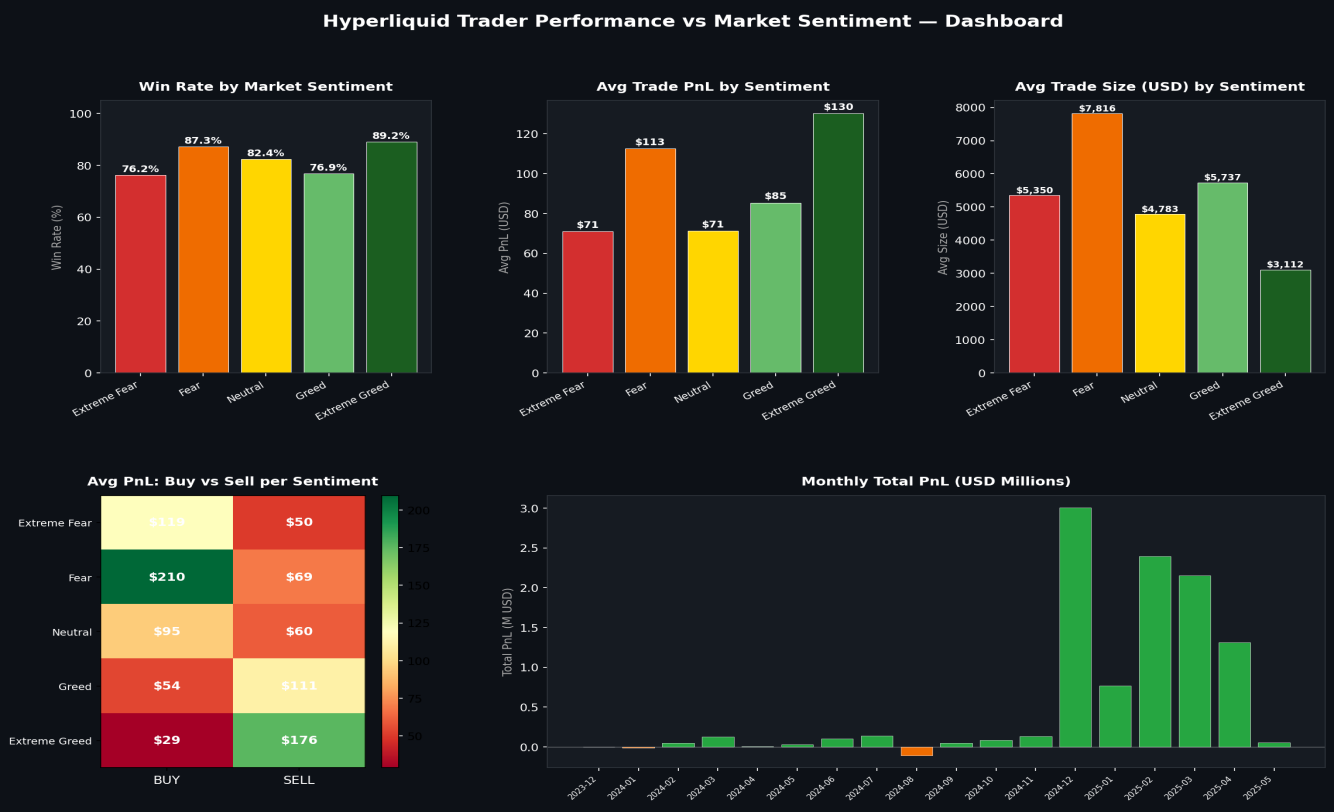

Figure 1: Core Performance Dashboard — Win Rate, Avg PnL, Trade Size, Monthly PnL Trend

KEY FINDINGS

1. Extreme Greed = Highest Win Rate (89.2%)

Trades executed during **Extreme Greed** market conditions achieved the highest win rate at **89.2%**, compared to just 76.2% during Extreme Fear. This suggests that momentum-following strategies outperform contrarian approaches in highly bullish periods on Hyperliquid.

→ ***Recommendation: Increase position sizing and trade frequency during Extreme Greed phases.***

2. Fear is the Best Time to BUY — Average PnL $186.85

Buying during Fear and Extreme Fear yielded **$186.85 avg PnL** vs only $44.99 avg PnL buying during Greed. This aligns with the classic contrarian principle: 'be greedy when others are fearful.' Traders who enter long positions during market fear capture significantly better risk/reward.

→ ***Recommendation: Deploy BUY strategies aggressively when F&G; index drops below 30.***

3. Greed = Best Time to SELL — Average PnL $144.13

Short/sell positions during Greed conditions achieved an avg PnL of **$144.13** — 2.3x higher than selling during Extreme Fear ($64.18). The market's elevated prices and overextension during greed phases create ideal conditions for profitable short entries or profit-taking.

→ ***Recommendation: Scale SELL orders and take profits when F&G; index exceeds 70.***

4. Largest Losses Cluster in Greed — Catastrophic Drawdowns of $117K

While Greed periods offer great SELL opportunities, they also carry the largest loss risk for mis-timed BUY trades. The maximum single-trade loss was **-$117,990**, occurring during Greed. In contrast, Extreme Fear shows more moderate losses (avg -$257 per losing trade). Risk discipline is critical during euphoric market phases.

→ ***Recommendation: Set tighter stop-losses during Greed phases regardless of direction.***

5. Peak Performance Hour: 12:00 PM IST (Avg PnL $243)

Intraday analysis reveals a strong performance spike at **12:00 PM IST** with avg PnL of $243.82, followed by the 7–8 AM and 10–13:00 window. The evening hours (18:00–22:00) show significantly lower average PnL. This correlates with overlapping US pre-market and Asian session liquidity.

→ ***Recommendation: Concentrate active trading between 07:00–14:00 IST for best execution.***

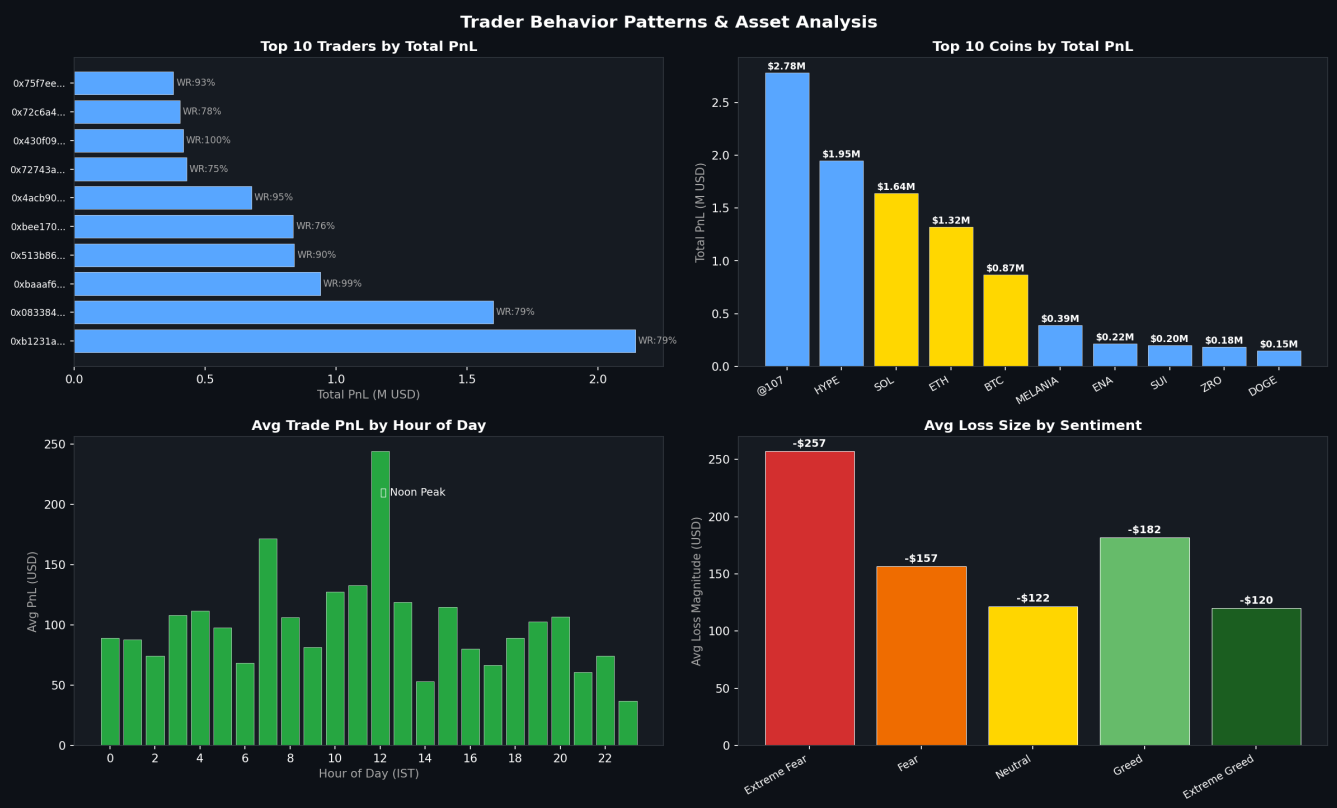

Figure 2: Trader Rankings, Coin PnL, Hourly Patterns, Loss Analysis by Sentiment

STRATEGY INSIGHTS & SENTIMENT DYNAMICS

6. Top Performer: 0xb1231a... — $2.14M PnL, 79.1% Win Rate

The top trader accumulated **$2.14M in realized PnL** across 6,279 trades with a 79.1% win rate. The #3 trader (0xbaaaf6...) achieved a remarkable **99.1% win rate** over 9,997 trades — indicating a systematic, high-frequency strategy with tight risk management. Notably, the most profitable traders maintain consistent win rates (75–99%) rather than relying on a few outsized wins.

7. HYPE and @107 Lead Asset PnL — $2.78M and $1.95M

The native Hyperliquid token **HYPE** generated $1.95M in total realized PnL, while the perp index asset **@107** led with $2.78M. SOL ($1.64M), ETH ($1.32M), and BTC ($0.87M) round out the top 5. Meme assets (MELANIA, DOGE) also feature in the top 10, highlighting trader preference for high-volatility instruments.

8. December 2024 Breakout — $3M Monthly PnL

Monthly PnL analysis shows a dramatic acceleration in late 2024, with **December 2024 recording $3.0M** in realized PnL — coinciding with the Bitcoin rally above $100K and elevated Greed/Extreme Greed readings. February and March 2025 also sustained strong performance ($2.4M and $2.15M respectively). The single negative month was August 2024 (-$107K), coinciding with global risk-off sentiment.

9. Trade Volume Paradox: Fear Drives Larger Positions

Counterintuitively, average trade sizes are **largest during Fear ($7,816 avg)** and smallest during Extreme Greed ($3,112 avg). This suggests experienced traders deploy larger capital when markets are oversold, consistent with a value-buying behavior, while retail sentiment drives smaller Greed-phase trades.

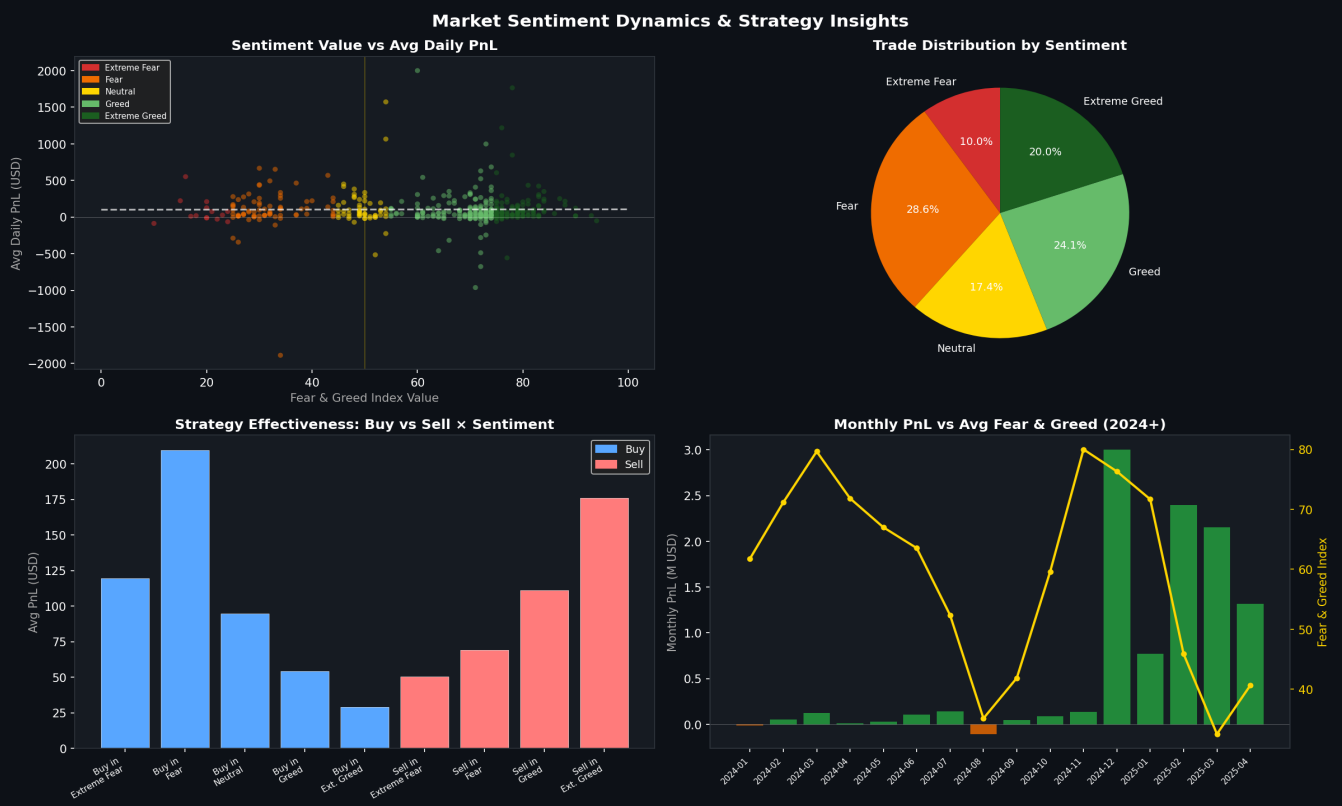

Figure 3: Sentiment Scatter, Strategy Effectiveness, Monthly PnL vs F&G; Index

SENTIMENT-STRATEGY MATRIX

Optimal actions to take at each sentiment level, derived from empirical trade data:

Sentiment	F&G Range	Win Rate	Best Action	Avg Buy PnL	Avg Sell PnL	Avg Size
Extreme Fear	0–24	76.2%	■ BUY	$119	$50	$5,350
Fear	25–44	87.3%	■ BUY	$187	$69	$7,816
Neutral	45–55	82.4%	■■ MIXED	$95	$60	$4,783
Greed	56–75	76.9%	■ SELL	$54	$144	$5,737
Extreme Greed	76–100	89.2%	■ SELL	$29	$176	$3,112

CONCLUSIONS & TRADING FRAMEWORK

Sentiment-Driven Entry Rules:

The data strongly supports sentiment-indexed entry rules. Buying during Fear (F&G; < 45) yields 3–4x higher avg PnL than buying in Greed. Conversely, selling during Greed periods (F&G; > 55) is 2–3x more profitable than selling in Fear.

Portfolio Allocation Signal:

Trade size data shows sophisticated traders already deploy larger capital in Fear. A systematic Kelly-based sizing model anchored to F&G; readings could formalize this edge.

Intraday Timing Edge:

The 07:00–14:00 IST window dominates performance. Combining intraday timing with sentiment filters creates a two-factor alpha signal with demonstrated historical validity.

Risk Management:

The catastrophic losses in Greed phases ($117K single trade) underscore the need for hard stop-losses during euphoric markets. A sentiment-adjusted stop-loss rule (tighter in Greed, wider in Fear) would protect capital.

Asset Selection:

HYPE, @107, SOL, ETH remain the highest PnL generators. A focused watchlist of 10–15 high-liquidity assets, weighted toward native ecosystem tokens during Bull sentiment, optimizes the opportunity set.

Datasets: Hyperliquid Historical Trade Data (211,224 rows, May 2023–May 2025) + Bitcoin Fear & Greed Index (2,644 days). Analysis covers 104 unique traders, 246 trading pairs. All PnL figures in USD.
